## Notes:

- All procedures are delivered by highly trained, certified and fully insured Elite and Advanced technicians for Plasma Pen by Louise Walsh International and your technician is using the world's number one, go-to plasma device and treatment solution which is used in over 40 countries and purchased by >1,250 technicians a year
- All Plasma Pen by Louise Walsh International technicians provide free and highly detailed consultations, the very best pre and post treatment products, the best treatment delivery enhancers and tools and they always provide the best patient aftercare and follow-up. All our technicians have invested heavily in purchasing a premium device and plasma treatment solution - a device that's been proven across >60,000 treatments over the last 12 months alone. Plasma Pen categorically delivers the shortest downtimes, the fastest recovery and the best results. Technicians carry significant overhead in terms of their insurance, the cost of any/all products used (including probes and topical anaesthetic), their investment in continual professional development, their facility costs, their advertising costs and many other financial factors
- Not all plasma is the same. If you buy cheap you will likely buy twice. You may also put yourself at significant risk. Pricing is the ultimate representation of a professional technician's work and service offering. If it is too low it will usually say a lot about the quality of the work offered. The price ranges shown represent verified and established market rates for professional Plasma Pen treatment using our worldwide market leading device and treatment solution. These prices represent fair value both for the safe, stunning and incredibly long lasting results we are able to deliver and for their long-term competitiveness and positive impact when compared to all other medi-aesthetic and surgical options
- Plasma Pen is a highly technical and artistic process but it is not always an exact science. Technicians can never guarantee an exact shrinking, tightening, lifting or softening result due to individual skin elasticity, the individual healing process and a very wide range of other factors - not least your strict adherence to the aftercare regime recommended. Depending on the procedure being delivered; results immediately following a treatment session may only represent 30% to 50% of the final result. The full effect should then be assessed over the coming 12 weeks as the extensive epidermal and dermal remodelling we stimulate kicks in - which includes the formation of a new and rejuvenated neoepidermis, neocollagenesis, neoelastogenesis and the reversal of elastotic change
- Depending on the patient, their individual skin and many other factors then some treatments will provide instant results. Others may require more than one treatment to achieve the desired outcome. Many treatments are complimentary and thus ideal to package up together to enjoy a discounted rate. Consequently; technicians never promise that one treatment will always be enough to achieve optimum results. Some results with some patients are, by design, cumulative for the greatest effects to be achieved (if very deep lines and/or significant glycation is present for example). You may be required to return for additional treatments before your overall procedure is deemed fully complete. The payment for any additional work, if applicable, will always be agreed with you prior to your treatment
- Treatments can be safely combined, often for a discounted rate, during the same treatment session and/or over a course of treatments or top-ups. Plasma Pen by Louise Walsh International is practically the only device where it is safe to combine upper and lower eyelid procedures together during the same treatment session
